## Lipoprotein Protocols (Methods in Molecular Biology)

Jose Ordoas compiles a cutting-edge collection of molecular protein techniques for studying advanced aspects of lipoprotein structure and metabolism. These step-by-step methods allow both the beginning and the advanced researcher to carry out not only fundamental, but also the most advanced genetic screening techniques, including RT-PCR and the preparation of relevant models of transgenic and knockout mice. In addition, novel techniques are presented to characterize plasma lipoproteins, their subfractions, and their modifications, and to determine the activity of relevant enzymes and carrier proteins. Each method is described in easily reproducible detail by a hands-on expert who has perfected it. Lipoprotein Protocols offers many powerful tools for unraveling the complexity of lipoprotein metabolism and determining the individual risk of coronary heart disease.
