**Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer)** De-Yi Shang  
Developing a new treatment of 'Free Convection Film Flows and Heat Transfer' began in Shang's first monograph and is continued in this monograph. The current book displays the recent developments of laminar forced convection and forced film condensation. It is aimed at revealing the true features of heat and mass transfer with forced convection film flows to model the deposition of thin layers. The novel mathematical similarity theory model is developed to simulate temperature- and concentration- dependent physical processes. The following topics are covered in this book: 1. Mathematical methods - advanced similarity analysis method to replace the traditional Falkner-Skan type transformation - a novel system of similarity analysis and transformation models to overcome the difficult issues of forced convection and forced film flows - heat and mass transfer equations based on the advanced similarity analysis models and equations formulated with rigorous key numerical solutions 2. Modeling the influence of physical factors - effect of thermal dissipation on forced convection heat transfer - a system of models of temperature and concentration-dependent variable physical properties based on the advanced temperature-parameter model and rigorous analysis model on vapor-gas mixture physical properties for the rigorous and convenient description of the governing differential equations - an available approach to satisfy interfacial matching conditions for rigorous and reliable solutions - a system of numerical results on velocity, temperature and concentration fields, as well as, key solutions on heat and mass transfer - the effect of non-condensable gas on heat and mass transfer for forced film condensation. This way it is realized to conveniently and reliably predict heat and mass transfer for convection and film flows and to resolve a series of current difficult issues of heat and mass transfer with forced convection film flows. Professionals in this fields as well as graduate students will find this a valuable book for their work.

### **From reader reviews:**

#### **Troy Riley:**

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each guide has different aim or maybe goal; it means that book has different type. Some people sense enjoy to spend their time for you to read a book. They are really reading whatever they get because their hobby is reading a book. How about the person who don't like looking at a book? Sometime, individual feel need book whenever they found difficult problem or exercise. Well, probably you should have this Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer).

#### **Kevin Kennard:**

Typically the book Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer) will bring someone to the new experience of reading some sort of book. The author style to clarify the idea is very unique. In case you try to find new book you just read, this book very suitable to you. The book Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer) is much recommended to you to see. You can also get the e-book from your official web site, so you can more easily to read the book.

#### **Jack Williams:**

You can spend your free time to read this book this reserve. This Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer) is simple to deliver you can read it in the area, in the beach, train as well as soon. If you did not possess much space to bring the actual printed book, you can buy often the e-book. It is make you quicker to read it. You can save the particular book in your smart phone. And so there are a lot of benefits that you will get when you buy this book.

#### **Rebecca West:**

That e-book can make you to feel relax. This book Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer) was colorful and of course has pictures on there. As we know that book Theory of Heat Transfer with Forced Convection Film Flows (Heat and Mass Transfer) has many kinds or type. Start from kids until teenagers. For example Naruto or Investigation company Conan you can read and believe that you are the character on there. Therefore , not at all of book tend to be make you bored, any it can make you feel happy, fun and chill out. Try to choose the best book for yourself and try to like reading that will.
