Engineering Thermodynamics and 21st Century Energy Problems: A Textbook Companion for Student Engagement (Synthesis Lectures on Energy and the Environment: Technology) Donna Riley

Energy is a basic human need; technologies for energy conversion and use are fundamental to human survival. As energy technology evolves to meet demands for development and ecological sustainability in the 21st century, engineers need to have up-to-date skills and knowledge to meet the creative challenges posed by current and future energy problems. Further, engineers need to cultivate a commitment to and passion for lifelong learning which will enable us to actively engage new developments in the field. This undergraduate textbook companion seeks to develop these capacities in tomorrow's engineers in order to provide for future energy needs around the world.

This book is designed to complement traditional texts in engineering thermodynamics, and thus is organized to accompany explorations of the First and Second Laws, fundamental property relations, and various applications across engineering disciplines. It contains twenty modules targeted toward meeting five often-neglected ABET outcomes: ethics, communication, lifelong learning, social context, and contemporary issues. The modules are based on pedagogies of liberation, used for decades in the humanities and social sciences for instilling critical thinking and reflective action in students by bringing attention to power relations in the classroom and in the world.

This book is intended to produce a conversation and creative exploration around how to teach and learn thermodynamics differently. Because liberative pedagogies are at their heart relational, it is important to maintain spaces for discussing classroom practices with these modules, and for sharing ideas for implementing critical pedagogies in engineering contexts.

Table of Contents: What and Why? / The First Law: Making Theory Relevant / The Second Law and Property Relations / Thinking Big Picture about Energy and Sustainability

From reader reviews:

David Colon:

Why don't make it to become your habit? Right now, try to ready your time to do the important work, like looking for your favorite e-book and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the guide entitled Engineering Thermodynamics and 21st Century Energy Problems: A Textbook Companion for Student Engagement (Synthesis Lectures on Energy and the Environment: Technology). Try to make the book Engineering Thermodynamics and 21st Century Energy Problems: A Textbook Companion for Student Engagement (Synthesis Lectures on Energy and the Environment: Technology) as your good friend. It means that it can to get your friend when you truly feel alone and beside those of course make you smarter than previously. Yeah, it is very fortunated in your case. The book makes you a lot more confidence because you can know almost everything by the book. So , we should make new experience as well as knowledge with this book.

Michael Kautz:

Nowadays reading books become more and more than want or need but also become a life style. This reading routine give you lot of advantages. The advantages you got of course the knowledge even the information inside the book in which improve your knowledge and information. The info you get based on what kind of publication you read, if you want get more knowledge just go with knowledge books but if you want experience happy read one using theme for entertaining like comic or novel. The Engineering Thermodynamics and 21st Century Energy Problems: A Textbook Companion for Student Engagement (Synthesis Lectures on Energy and the Environment: Technology) is kind of guide which is giving the reader unpredictable experience.

Curtis Phillips:

Typically the book Engineering Thermodynamics and 21st Century Energy Problems: A Textbook Companion for Student Engagement (Synthesis Lectures on Energy and the Environment: Technology) has a lot of information on it. So when you make sure to read this book you can get a lot of gain. The book was compiled by the very famous author. Tom makes some research ahead of write this book. This particular book very easy to read you can get the point easily after scanning this book.

Tracy Rojas:

A lot of e-book has printed but it differs from the others. You can get it by world wide web on social media. You can choose the most effective book for you, science, comedy, novel, or whatever by simply searching from it. It is called of book Engineering Thermodynamics and 21st Century Energy Problems: A Textbook Companion for Student Engagement (Synthesis Lectures on Energy and the Environment: Technology). You can include your knowledge by it. Without causing the printed book, it may add your knowledge and make

an individual happier to read. It is most essential that, you must aware about reserve. It can bring you from one destination to other place.
